### Measurement Methods of Pigmentation According to Guideline for Evaluation of Quasi-Drug Whitening Products

Takayuki KATAGIRI

#### Abstract

The guidelines for evaluation of quasi-drug whitening products for new efficacy claims have been established. In this article, I would like to introduce the summary of these guidelines. As these guidelines only establish basic guidance for evaluation procedures, it will be necessary to draw up proper protocols based on a full examination of the testing requirements and conduct a precise analysis of the results.

**Key words:** quasi-drug, whitening, pigmentation, efficacy, improve.
